

## 3-Terminal 0.1A Positive Adjustable Regulator

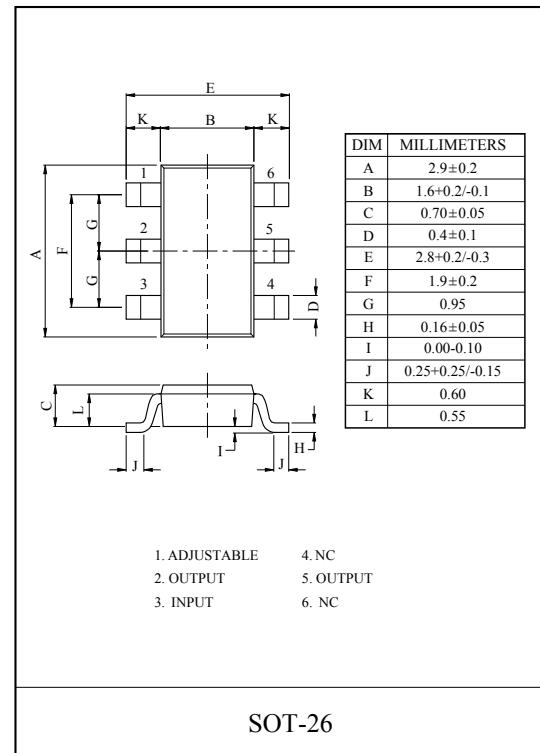

The FR317LSC is adjustable 3-terminal positive voltage regulator capable of supplying in excess of 100mA over a 1.2V to 18.5V output range.

This is exceptionally easy to use and require only two external resistors to set the output voltage.

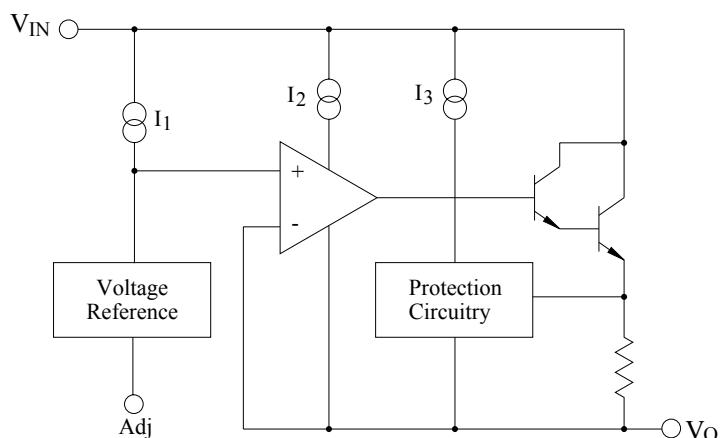

Further, it employ internal current limiting, thermal shutdown and safe area compensation.

## FEATURES

- Adjustable output between 1.2V and 18.5V
- Guaranteed 100mA output current
- Line regulation typically 0.01%/V
- Load regulation typically 0.1%
- 80dB ripple rejection (with Cadj)
- Internal thermal overload protection
- Internal short-circuit current limiting
- Output transistor safe-area compensation

**TYPICAL APPLICATION (PROGRAMMABLE REGULATOR)**

$C_i$  is required when regulator is located an appreciable distance from power supply filter.

$C_o$  is not needed for stability, however, in the range of  $1\mu F$  to  $100\mu F$  of aluminum or tantalum electrolytic are commonly used to provide improved output impedance and rejection of transients.

Since  $I_{Adj}$  is controlled to less than  $100\mu A$ , the error associated with this term is negligible in most applications.
