

High Precision Operational Amplifiers

DESCRIPTION

The OP07C is a high precision operational amplifier, offering low offset voltage and long-term stability. The low offset voltage ($150\mu\text{V}$, maximum) and high gain (up to 200V/mV) make OP07C wellsuited in the applications related to instrumentation. The differential input, including a wide inputvoltage range ($\pm 13\text{V}$) and high CMRR (100dB), provides outstanding linearity and gain precision in high loop gain circuit.

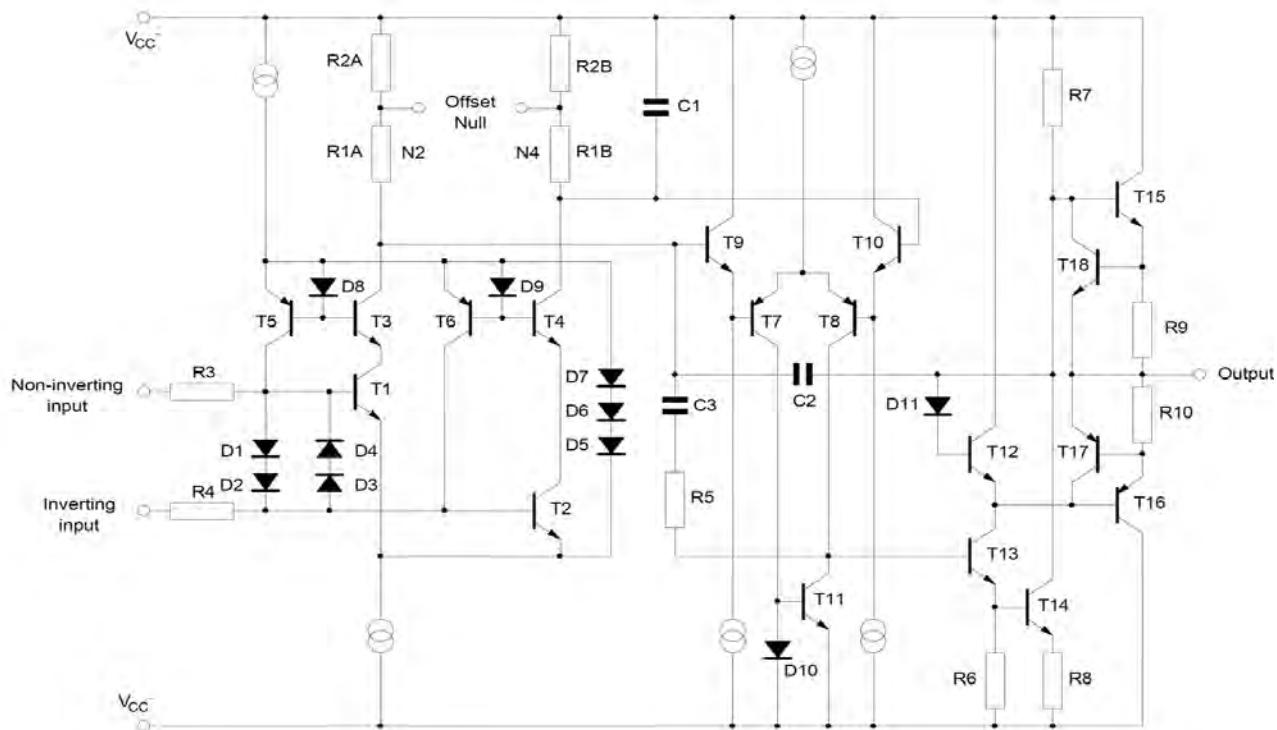

FEATURES

- Low Offset Voltage: $150\mu\text{V}$ (max)
- Low Offset Current: $I_{\text{O}}=1.3\text{nA}$ (Typ)
- Wide Input-Voltage Range: $\pm 3\text{V}$ to $\pm 20\text{V}$
- High CMRR: 100dB (min)

APPLICATION

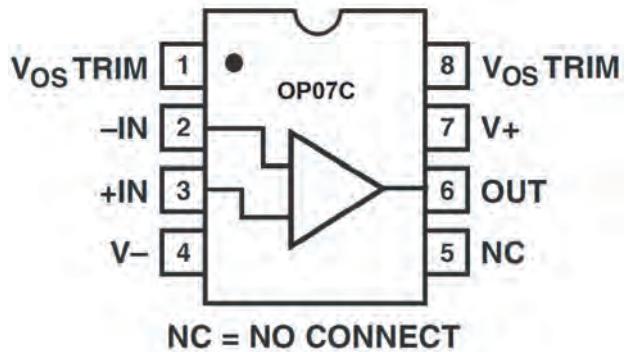

- Instrumentation
- Precision Filters
- Sensors and Controls
